EDUCATION

Universidad Autónoma de Baja California (UABC), Tijuana, Mexico — Expected graduation: **12/27**

B.S. in Software Engineering and Emerging Technologies · GPA: 89.6/100

Relevant coursework: Human-Computer Interaction, Requirements Engineering, Software Analysis & Design, Software Patterns, Data Structures, Databases.

SKILLS

Design: Figma (prototyping, components, Figma Make), wireframing, high-fidelity UI, design systems, Aseprite, Blender
UX research: moderated usability testing (think-aloud), SUS, hierarchical task analysis, storyboarding, heuristic evaluation
Front end & code: HTML/CSS, JavaScript/TypeScript, React, Next.js, Flutter/Dart, Python, Java, C++, Firebase, Git
Languages: Spanish (native), English (fluent)

DESIGN PROJECTS

8=1 UABC: Student mobile app | Figma, Flutter — Aug 2026 – Present

- Designed the student mobile app (10 screens in Figma) for a university program where every 8 activities attended earns an elective credit: onboarding, calendar, QR check-in, history and profile.
- Put progress toward the next credit (5/8) on the home screen and made check-in the single primary action, with a manual-code fallback for virtual events and failed cameras.
- Built the designs in Flutter with a centralized theme and shared widget library, so the app matches the Figma file screen for screen across a 3-person team.

Laminar: Visual Git client for students (solo) | Figma, React, Python/PyQt — Oct 2025 – Dec 2025

- Designed a desktop app from start to finish, in three passes: wireframes, then mid-fidelity, then high-fidelity, including the Git initialization and sync flows.
- Generated the React front end with Figma Make and connected it to a Python/PyQt back end that runs Git, with live progress feedback while a sync runs.

Catálogo Cimarrón: Library catalog redesign | Figma, usability testing — Aug 2025 – Dec 2025

- Mapped how students find a book using hierarchical task analysis and storyboards annotated with their emotions at each step, then designed a 12-screen prototype.
- Ran moderated think-aloud usability tests (6 timed tasks) and a SUS survey: 100% task success, SUS score 88.75.
- Ranked 4 usability issues by severity, including a critical missing "reserve" action that the success metrics alone did not reveal.

EasyReq: AI-assisted requirements web app | Next.js, Firebase — Jan 2026 – Present

- Led the UI redesign for an 8-person team and built shared modal, confirmation and error components used across the app.
- Simplified team management by consolidating editing into a single screen and removing redundant controls.

ENGINEERING PROJECTS

MonitorUABC: Real-time service monitoring | Python, JavaScript, Firebase — May 2026 – Aug 2026

- Co-built a client-server dashboard for university services, adding centralized caching that prevents request overloads on institutional servers.

Unlikely Rivals: 2D platform fighter | C++, SFML, Aseprite — Jun 2025 – Sep 2025

- Built the game and drew its pixel-art sprites; used finite state machines for smooth animation transitions.

EXTRACURRICULARS

NASA International Space Apps Challenge: Selected participant — Nov 2026
